

Building 3 and 4 Thermostat

OTHER THERMOSTATS THAT COULD BE IN UNIT

There could be a different thermostat in the unit. This thermostat does not allow for any programming. It would be set the temp, the fan (Auto or On) and the system option of HEAT / COOL/ OFF.

Thermostat

1. The two visible buttons:

Controls the set-point temperature.

2. Open The flip door:

Behind the flip door there are three buttons.

1. Left button is the **FILTER RESET** button, resets the timer for the filter icon. We change the filter on a schedule that is created in the office.
2. Middle button is the **FAN** button, turns the FAN to ON (runs all the time) or AUTO (runs when HVAC unit calls it to run).
3. Right button is the **MODE** button, turns the HVAC unit to **COOL, HEAT** or **AUTO**.

3. The read-out screen:

Screen shows the mode the system is set-to, **HEAT, COOL** or **AUTO**.

Screen shows the room temperature

Push the side buttons and the set-point temperature shows

Screen shows the filter icon

Screen shows **AUXILURY** heat (supplemental heat to assist HVAC unit in heat mode)

To Operate Manually (Thermostat does not have a programming mode):

1. Use the **MODE** button to select the desired mode wanted, **HEAT, COOL** or **AUTO** (will run either mode based on the temperature set-point. If set at 72° in AUTO, the unit will turn HEAT on if it senses a few ° below or it will turn on COOL if it senses a few ° above.)
2. Use the two buttons on the right to set the desirable temperature.
3. **FAN** button set to **AUTO** it will come on with unit or to **ON** to run all the time
